Success Stories:

Plateau Systems, Ltd. (commercial)

SSDI has led the project to successfully convert Plateau's legacy client-server code base onto the J2EE-compliant platform. This solution was one of the first in the industry and catapulted Plateau to the leadership position in providing the talent management software to global enterprises.

In addition SSDI, has developed numerous modules utilizing cutting-edge web technologies within Plateau's Suite of products:

- Internalization/localization with the same code base into 20+ different languages (language packs).
- E-commerce module with inventory, catalog, pricing rules, shopping cart and approval processes.
- Tools and technologies: J2EE, Java, Struts, JSP, Javascript, ActionScript, Flux, SOAP, Web Service (Axis), Flash, Flex, ILOG, and others.

U.S. Postal Service (government)

An Online Research Library, Market Tracks, serves as a central repository for comprehensive, reliable, up-to-date information on the market in which the Postal Service operates, and on the private firms that compete with postal products and services.

- MTLoader
- Index Search Engines
- Portal Server
- Visual Basic , Index Server, SQL Server, HashSite
